We Study Two Broad Questions

How do people (mis)perceive immigration?

Are perceptions of immigration, about the number, origin, religion, unemployment, education, poverty, correct amongst natives of the host countries?

What are natives' views on immigration policies?

What are perceptions of and views on immigration correlated with?

What is the link between immigration and redistribution?

Are perceptions of immigration and views about redistribution correlated? And do perceptions of immigrants "cause" preferences for redistribution?

Method and Setting

Large-scale surveys in 6 countries: [France](#), [Germany](#), [Italy](#), [Sweden](#), [UK](#), and [US](#):

Done through commercial survey companies in Nov 2017-Feb 2018.

Sample sizes: 4,500 in US, 4,000 in FR, DE, IT, and UK, 2,000 in SE;

Total of \approx 22,500 respondents.

Survey components:

Background info, perception of immigrants (number, origin, religion, hard work, economic conditions, support), policy preferences (redistribution + immigration).

Randomized treatments:

“Order” treatment where people simply asked about immigration before being asked about redistributive policies.

Information on 1) number, 2) origins, 3) hard work of immigrants.

Main Findings: Perceptions of Immigration Substantially and Systematically Wrong

Across countries and respondent characteristics:

- Stark overestimation of the number of immigrants

- Stark overestimation of share of Muslim (underestimate Christians)

- Underestimation of immigrants education, level of income, stable employment, contribution to welfare state.

Larger misperceptions for respondents who are: i) in immigrant intensive, low-skill jobs, ii) without college, iii) female, and iv) right wing.

Left and right-wing equally misperceive % of immigrants, but right-wing believe immigrants have “less desirable” in their views characteristics.

Support for redistribution and immigration strongly correlated.

- Number of immigrants per se does not matter: perceived composition of immigrants (origin, work effort..) does.

Main Findings: Effects of Information

Just making people **think about immigrants** (“order treatment”) generates a strongly negative reaction in terms of redistribution.

Recall negative baseline perceptions about immigrants.

“Hard work” treatment on its own can generate some more support for redistribution.

Negative priming effect cancels this.

Eliciting Perceptions on Number of Immigrants

The pie chart below represents all the people currently living in the U.S. Out of all these people currently living in the U.S., how many do you think are legal immigrants? Move the slider to indicate how many out of every 100 people you think are legal immigrants.

U.S. population by country of birth

0 10 20 30 40 50 60 70 80 90 100

Eliciting perceptions on Origin of Immigrants

U.S. immigrant population by origin

Donation Question

*By taking this survey, you are automatically enrolled in a **lottery to win \$1000**. In a few days you will know whether you won the \$1000. The payment will be made to you in the same way as your regular survey pay, so no further action is required on your part. In case you won, would you be willing to **donate part or all of your \$1000 gain for a good cause**? Below you will find 2 charities which help people in the U.S. deal with the hurdles of everyday life. You can enter how many dollars out of your \$1000 gain you would like to donate to each of them. If you are one of the lottery winners, you will be paid, in addition to your regular survey pay, \$1000 minus the amount you donated to charity. We will directly pay your desired donation amount to the charity or charities of your choosing.*

Charities:

- ▶ US: Feeding America, The Salvation Army
- ▶ France: Les restos du cœur, Emmaüs
- ▶ Germany: SOS Kinderdorf, Tafel
- ▶ Italy: Caritas, Save the Children Italia
- ▶ Sweden: Frälsningsarmén, Majblomman
- ▶ UK: Save the Children U.K., The Salvation Army

Ensuring reasonable answers

Appeal to people's social responsibility. [▶ Detail](#)

Warn that “careless answers” will be flagged.

Constrain answers to add up to 100. Tabulating answers – few strange patterns. [▶ Detail](#)

Attention check question (99.5%), Meade and Craig (2012).

Time spent on separate questions' pages and overall survey time.

Ask for feedback post survey, whether felt survey was biased (16%).

Perception of Immigrants

Perceived vs. Actual Number of Immigrants (By Country)

Misperception of Number of Immigrants

Who misperceives more? Those 1) in high immigration sectors with low education, 2) without college, 3) who are young, 4) who have an immigrant parent, 5) women. [▶ US Sectors](#)

Perceived vs. Actual Share of Muslim Immigrants

▶ Middle East

▶ North Africa

Perceived vs. Actual Share of Christian Immigrants

Share of Christian Immigrants

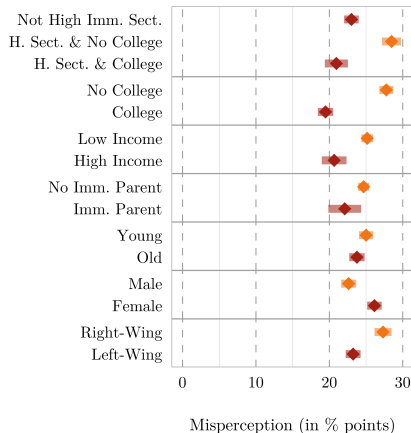

◆ Actual ■ Perceived (mean)

Misperception (in % points)

▶ Latin America

Perceived vs Actual Unemployment of Immigrants

▶ Low-Educated

▶ High-Educated

▶ Poverty

Perceived vs Actual Representation of Immigrants among Poor and Low-Educated

% of Poor who are Immigrants

◆ Actual ■ Perceived (mean)

% of Low Educated who are Immigrants

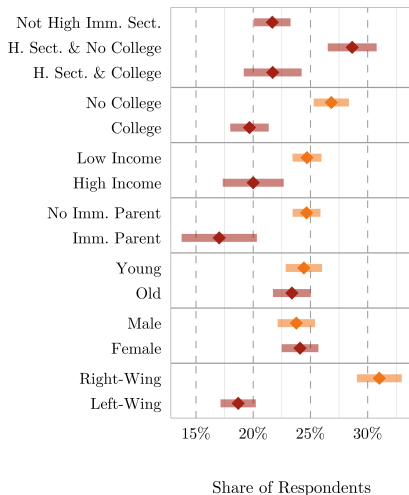

◆ Actual ■ Perceived (mean)

Share of Respondents who believe average immigrant gets twice the amount of transfers of natives

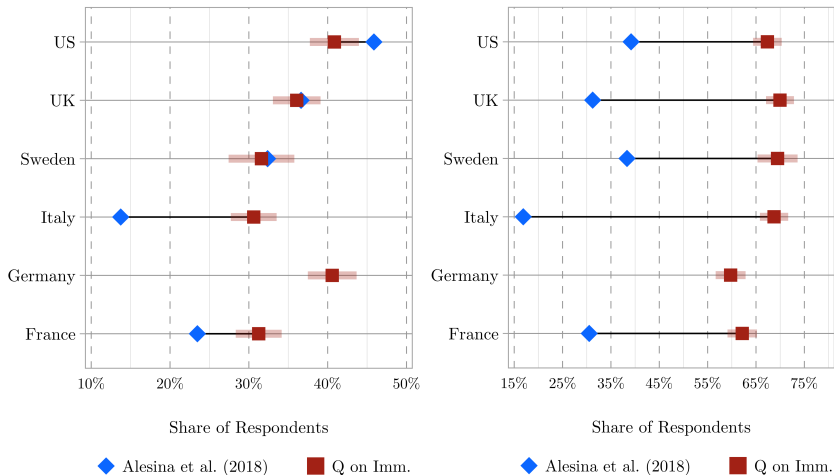

► Relative Transfers

“Bias”: Does Mohammad Get More Transfers and Pay Less Taxes all Else Equal?

Across all countries, and respondent characteristics, a non trivial share think all else equal Mohammad gets more transfers and pays less taxes. France and Italy are most “biased.” Low educated in high immigrant sectors, non college educated, the poor, and right wing are most biased.

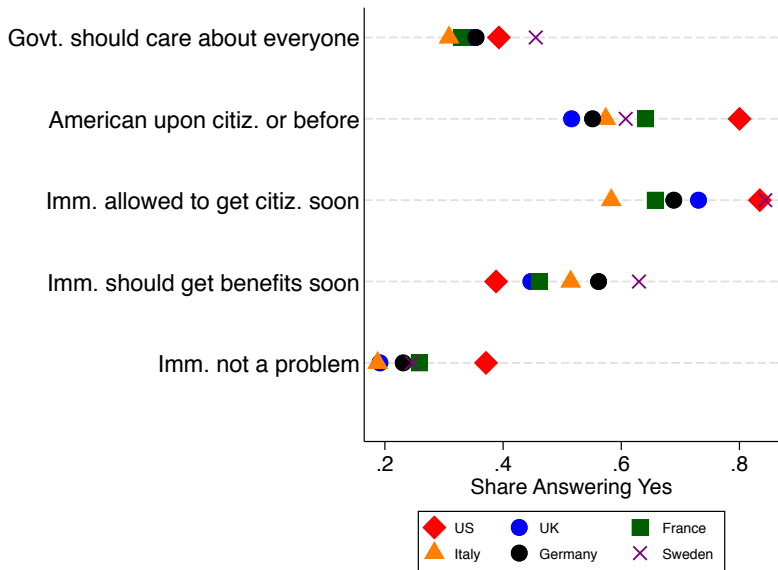

% of Respondents who Think Poor Immigrants Don't Put in Effort and that Rich Immigrants Worked Hard

Countries vary on whether they think poor immigrants or poor natives are most likely to be lazy. U.S. is an outlier (also thinks poor are lazy in general). All countries agree that IF an immigrant got rich, they must have worked hard (IT & FR – sticky social classes, inherited advantages?)

Descriptive Part about Support for Redistribution and Immigration

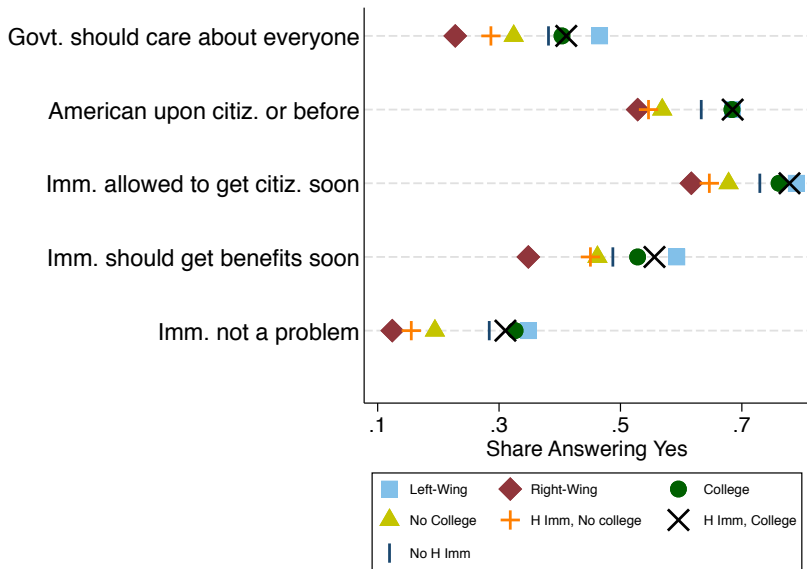

Support for Immigration (By Country)

Different dimensions of support for immigration are important.

U.S. most supportive of immigration, but not of benefits for immigrants (or in general).

Support for Immigration (By Group)

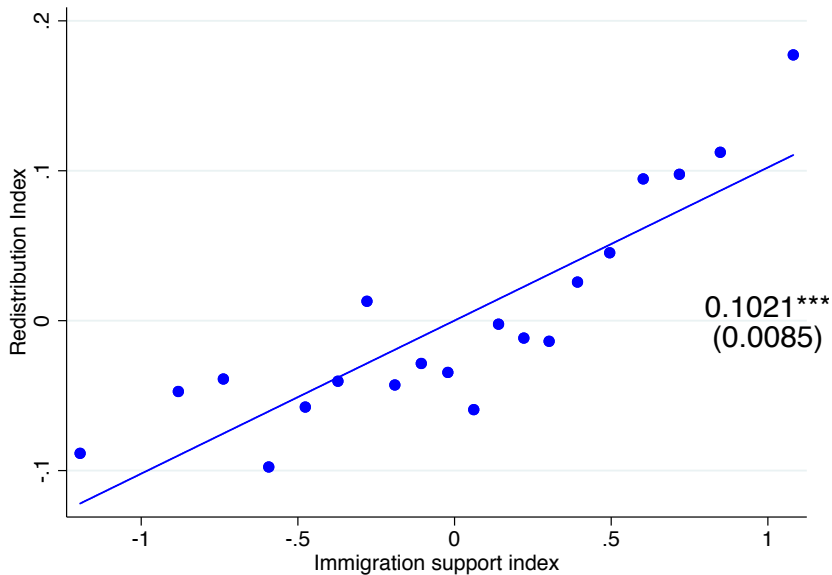

Ranked by immigration support: Left wing > High immigration sector + college ≥ college > No high immigration sector > No college > No college in high immigration sector > Right-wing.

Immigration Perceptions and Redistribution: Correlations

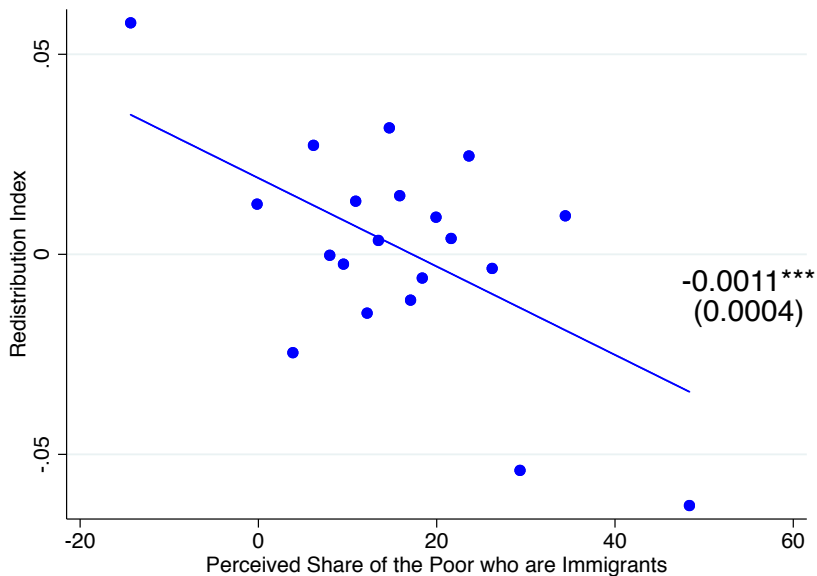

Measuring Support for Immigration and Redistribution

- **Immigration support index:** standardized z-score index, combines
 - ▶ Immigration is not a problem (Dummy).
 - ▶ Immigrants should get benefits 3 years after arrival or sooner (Dummy).
 - ▶ Immigrants should be allowed to apply for citizenship 5 years after arrival or sooner (Dummy).
 - ▶ Immigrants truly “American” when get citizenship or sooner (Dummy).
 - ▶ Should the government care about everybody? (1 = only care about natives to 7 = care equally about all).
- **Redistribution index:** standardized z-score index, combines
 - ▶ Tax rates on top 1% (+) and retention rate ($1 - \tau$) on bottom 50%.
 - ▶ Budget allocated to Health, Education, Safety Net and Pensions.
 - ▶ Support spending on schooling, housing, income support (Dummy).
 - ▶ Income inequality is a serious problem (Dummy).

Support for Immigration and for Redistribution are Very Strongly Correlated

Perceived Share of Poor Who Are Immigrants and Support for Redistribution

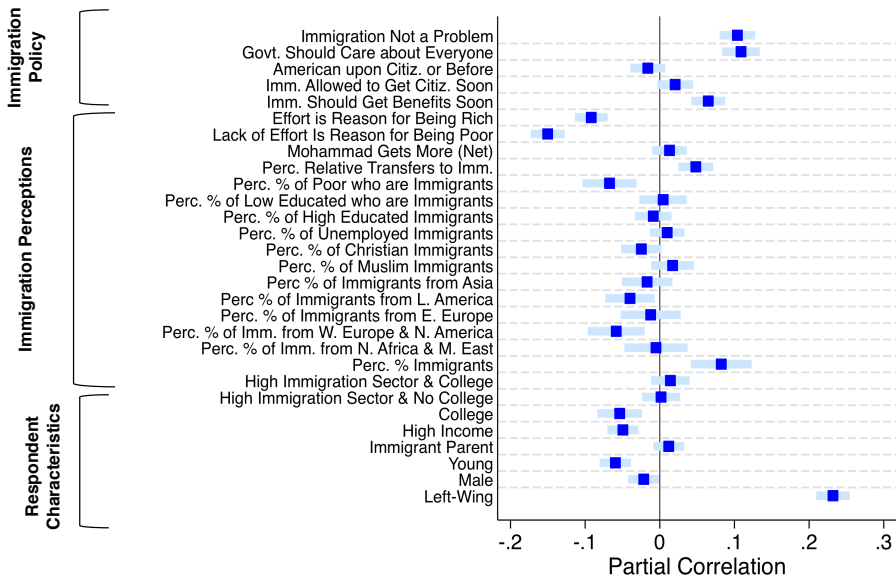

What Predicts Support for Immigration?

Support for immigration index regressed jointly on z-scores of all variables on the left + country FE.

What Predicts Support for Redistribution?

Support for redistribution index regressed jointly on z-scores of all variables on the left + country FE.

Immigration perceptions and Redistribution: Experimental Evidence

Treatment: “Order of the Questions”

1 Immigration Block: [Randomized]

- ▶ **Perceptions of Immigrants.** Number, origin, effort, “Free Riding”, economic conditions (education, poverty, unemployment, transfers).
- ▶ **Immigration Policies:** Citizenship, when to receive benefits, whether govt should care equally, when are immigrants “truly” American.

2 Redistribution Block: [Randomized]

- ▶ **Redistributive Policies:** Overall involvement, income support policies, income taxes, budget + Donation question.
- ▶ **Role of Government:** Trust, tools to reduce inequality, is inequality a problem, scope for government to intervene in redistribution.

Effects on Redistribution Preferences of Thinking of Immigrants

	Imm Support Index (1)	Imm Not A Problem (2)	Redistribution Index (3)	Inequality Serious Problem (4)	Donation Above Median (5)

Treatments: Origin of Immigrants

The number of little stick men is proportional to the true number of immigrants coming from each region

Latin America

Treatments: Origin of Immigrants

Latin America

Treatments: Hard Work of Immigrants

Emma legally came to the U.S. at age 25.

She lives with her husband - a construction worker - and two small children in a one-bedroom apartment.

For the past 5 years, she has been working in a retail store.

Link to video: https://youtu.be/_1SoLYX80yE

Treatments: Hard Work of Immigrants

She starts work at 5 am every day of the week, earning the minimum wage for such tasks as restocking the shelves, helping customers, mopping the floor and cleaning the bathrooms.

Treatments: Hard Work of Immigrants

When her day shift at the store ends at 3 pm, Emma starts her second job as a cleaning lady.

She takes two buses to get to her clients.

Treatments: Hard Work of Immigrants

She finishes around 7 pm and gets home by 8 pm.

Treatments: Hard Work of Immigrants

She then makes dinner for her family and sometimes helps the children with their homework before they go to bed.

Treatments: Hard Work of Immigrants

Emma takes online courses.
She stays up until midnight to
work on her courses.

She cannot take out a loan to
go to a full-time college.

Treatments: Hard Work of Immigrants

Emma and her husband have no free time, no weekends, and haven't taken any holidays since arriving in the U.S..

Despite working two jobs and barely making ends meet, Emma is very happy to be in the U.S..

She hopes that thanks to her hard work she will one day be able to start her own small business.

Observations	20049	20011	20049	20047	20049
Control mean	0.00	0.25	0.00	0.57	0.45

Share of immigrant treatment: ↑ support for immigration by 4% of left-right wing gap; ↑ share who say immigration not a prb by 10% relative to control group.

Hard Work of Immigration treatment: ↑ support for immigration by 11% of left-right wing gap; ↑ share who say immigration not a prb by 10% relative to control group. ↑ redistribution support by 6% of left-right wing gap.

Understanding the Treatment Effects on Redistribution Preferences

Order treatment has negative effect because of the very negative baseline views that people have of immigrants.

Information treatments:

Each contains a “mini” order treatment.

Can positive info overturn that negative small prime?

Share of immigrants: No. Not correlated either.

Origin of immigrants: No. Indirect?

Hard work: Yes.

But even “Hard work” positive effects disappear when making people think about detailed characteristics of immigrants.

Summary of Heterogeneous Treatment Effects

We look at heterogeneous treatment effects of the three groups with most different ex ante perceptions of immigrants: [▶ Tables](#)

- 1 Left vs. right wing
- 2 College vs. non college-educated
- 3 Low-skilled in immigration intensive sectors vs. others.

Two main findings:

All previously described effects hold, but groups with are anti-government redistribution (right wing) react in terms of charity donations only.

Groups with most negative baseline views of immigrants react most negatively to being prompted to think about immigrants (non college educated, right wing, low skill in immigration intensive sectors).

Conclusion

Perceptions of immigrants systematically very wrong and negative.

Support for redistribution correlated with perceived free riding & lack of hard work of immigrants, not so much with their number.

Just making people think about immigrants brings out baseline (very negative) views and generates negative impact on redistribution.

Natives' views about immigrants can be strategically manipulated by anti-immigration policies.

They can also be manipulated by anti-redistribution parties to gain support for their views about redistribution even when they don't care much about immigration per se.

Next step: Minorities, established for a long time in each country.

Eliciting Perceptions on Effort of Immigrants

*Which has more to do with why an immigrant living in the U.S. is poor?
[Lack of effort on his or her own part; Circumstances beyond his or her control]*

*Which has more to do with why an immigrant living in the U.S. is rich?
[Because she or he worked harder than others; Because she or he had more advantages than others]*

▶ Back

Economic Conditions of immigrants

Out of every 100 people born in the U.S. how many are currently unemployed? By “unemployed” we mean people who are currently not working but searching for a job (and maybe unable to find one).

Now let's compare this to the number of unemployed among legal immigrants. Out of every 100 legal immigrants how many do you think are currently unemployed?

Out of every 100 people born in the U.S., how many live below the poverty line? The poverty line is the estimated minimum level of income needed to secure the necessities of life.

Let's compare this to poverty among legal immigrants. Out of every 100 legal immigrants in the U.S. today, how many do you think live below the poverty line?

U.S. born residents receive government transfers in the form of public assistance, Medicaid, child credits, unemployment benefits, free school lunches, food stamps or housing subsidies when needed. How much do you think each legal immigrant receives on average from such government transfers? An average immigrant receives... [No transfers/.../More than ten times as much as a US born resident] [▶ Back](#)

Are people “Biased” Against Immigrants?

Imagine two people, John and Mohammad, currently living in the U.S. with their families. John is born in the U.S., while Mohammad legally moved to the U.S. five years ago. They are both 35, have three children, and earn the same low income from their jobs.

In your opinion does Mohammad pay more, the same, or less in income taxes than John? [A lot more; more; the same; less; a lot less]

In your opinion does Mohammad, who is an immigrant, receive more, the same, or less government transfers (such as public assistance, Medicaid, child credits, unemployment benefits during unemployment spells, free school lunches, food stamps or housing subsidies) than John? [A lot more; more; the same; less; a lot less]

Questions on Policies

Logic: Split desired policies into components

- i) government involvement and intervention in redistribution,
- ii) how to share a given tax burden,
- iii) how to allocate a given budget.

Support for policies to reduce inequality: schooling, housing, income support. Subject to other policies being reduced.

Income taxes on top 1%, next 9%, next 40%, bottom 50%.

Budget allocation on 1) Defense/ Security, 2) Infrastructure, 3) Education, 4) SS, Medicare, DI, and SSI, 5) Social Insurance and Income Support Programs, 6) Health, 7) Affordable housing.

The government raises a certain amount of revenue through the income tax in order to sustain the current level of public spending. In your opinion, what would be the fair split of the tax burden to sustain public spending?

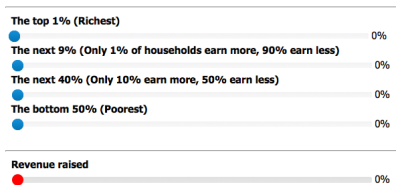

The income tax* rate is the percentage of your income that you pay in federal income tax. For example, if you earn \$30,000 and you pay \$3,000 in income taxes, your income tax rate is 10%.

Please use the sliders below to tell us how much you think each of the following groups should pay as a percentage of their total income.

While you adjust the four sliders for each group, the fifth bar at the bottom moves in order to show you how much of the current revenue you have been able to raise so far. The bar appears red as long as you have not raised enough revenue, or if you have raised more money than what is needed.

You will only be able to move to the next question when you meet the revenue target and the bar becomes green.

* We consider only the Federal income tax, which is a tax on household income. If you receive a regular paycheck, this tax is automatically taken out of your pay. When you file a federal tax return each year you calculate the exact amount you owe, and you get a tax refund from the federal government if you paid more than you owe. To keep things simple, we do not include other taxes such as social security taxes, state income taxes or sales taxes.

You have not raised enough revenue.

▶ Back

- 1) **Defense and National Security**, which refers to the costs of the Defense department and the costs of supporting security operations in the U.S. and in foreign countries.
- 2) **Public Infrastructure**, which includes, among others, transport infrastructure like roads, bridges and airports, and water infrastructure.
- 3) **Spending on Schooling and Higher Education**, including help for children from low income families to attend school and university.
- 4) **Social Security, Medicare, Disability Insurance and Supplemental Security Income (SSI)**, which provide income support and help with health care expenses to the elderly and the disabled.
- 5) **Social Insurance and Income Support Programs**. This covers help to the unemployed (through unemployment insurance) and help for low income families (such as through Food stamps or the earned income tax credit (EITC), a tax credit for low-income working families)
- 6) **Public Spending on Health**, such as Medicaid for the poor (a healthcare program for low income families) or tax subsidies to help families buy health insurance.
- 7) **Affordable Housing**. This includes subsidies to make housing more affordable for low income families and funds to build and manage public housing.

Please enter the percent of the budget you would assign to each spending category (the total must sum to 100):

Defense and National Security	<input type="text"/>
Public Infrastructure	<input type="text"/>
Spending on Schooling and Higher Education	<input type="text"/>
Social Security, Medicare, Disability Insurance and Supplemental Security Income (SSI)	<input type="text"/>
Social Insurance and Income Support Programs	<input type="text"/>
Public Spending on Health	<input type="text"/>
Affordable Housing	<input type="text"/>
Total	<input type="text" value="0"/>

Here are several things that the local, state, or federal government might do to reduce income differences between rich and poor people. Please indicate if you favor or oppose them. Keep in mind that, naturally, to finance an expansion of any of these policies, other types of spending (like spending on infrastructure and defense, for example) would have to be scaled down or taxes would have to be raised.

*Would you say that you strongly favor, favor, neither favor nor oppose, oppose or strongly oppose **spending more money on schools in poor neighborhoods?***

*Would you say that you strongly favor, favor, neither favor nor oppose, oppose or strongly oppose **spending more money to provide decent housing for those who can't afford it?***

*Would you say that you strongly favor, favor, neither favor nor oppose, oppose or strongly oppose **increasing income support programs for the poor?***

Questions on Role and Capacities of Government

Are income differences between rich and poor people a problem?

Tools of the government to reduce income inequality?

Scope of government to reduce income inequality, from 1 to 7.

Trust in government

Questions on Inequality and Role of Government

How much of the time do you think you can trust our federal government to do what is right? [Almost always; A lot of the time; Not very often; Almost never]

To reduce income differences between rich and poor people the government (at the local, state and federal level) has the ability and the tools to do: [Nothing at all/ ... / A lot]

Do you think income differences between rich and poor people are: [Not a problem at all/ ... / A very serious problem]

Some people think that the government (at the local, state, or federal level) should not care about income differences between rich and poor people. Others think that the government should do everything in its power to reduce income inequality. Rate on a scale of 1 to 7 on how you feel about this issue, with 1 being the government should not concern itself with income inequality and 7 being the government should do everything in its power to reduce income inequality.

We are a non-partisan group of academic researchers from the Faculty of Arts and Sciences at Harvard University. Our goal is to understand how information we see and hear in the media influences views on policies. No matter what your political views are, this is an important matter, and by completing this survey, you are contributing to our knowledge as a society. You might not agree with all the information presented, and that is perfectly fine. If you do not feel comfortable with a question you can skip it. Our survey will give you an opportunity to express your own views.

Please note that it is very important for the success of our research that you **answer honestly** and **read the questions very carefully** before answering. Any time you don't know an answer, just give your best guess. However, please be sure to spend enough time reading and understanding the question. To ensure the quality of survey data, your responses will be subject to sophisticated statistical control methods, which can detect incoherent or rushed answers. **Responding without adequate effort or skipping many questions may result in your responses being flagged for low quality and you may not receive your payment.**

It is also very important for the success of our research project that you **complete the entire survey**, once you have started. This survey should take (on average) about 20 minutes to complete. If you complete the entire survey, you will be invited to take another voluntary paid follow up survey a week from now, if you wish.

Notes: Your participation in this study is purely voluntary. Your name will never be recorded by researchers. Results may include summary data, but you will never be identified. The data will be stored on Harvard servers and will be kept confidential. The collected anonymous data may be made available to other researchers for replication purposes. Please print or make a screen-shoot of this page for your records. If you have any question about this study, you may contact us at socialsciencestudies@gmail.com. For any question about your rights as a research participant you may contact cuhs@harvard.edu.

High Immigration Sectors – United States (I)

A sector is defined *High Immigration* if the share of workers who are immigrant in that sector is higher than the country average.

- **Farming, fishing, and forestry occupations:** farmers, fishers, agricultural workers etc.
- **Building and grounds cleaning and maintenance occupations:** maids and housekeeping cleaners, janitors, building cleaning workers, grounds maintenance workers etc.
- **Construction and extraction occupations:** painters, construction and maintenance, plumbers, electricians, extraction workers etc.
- **Computer and mathematical occupations:** occupations related to mathematics, data and IT management, such as statisticians, web developers, computer programmers, actuaries, etc.

High Immigration Sectors – United States (II)

- **Production occupations:** industrial and artisanal production of goods, materials and components of any kind, industrial and artisanal food production, laundry, dry cleaning, sewing and tailoring, shoe making, woodworking, energy, petroleum and gas production, water operation, jewels and metal working etc.
- **Life, physical, and social science occupations:** animal, food, soil and plant scientists, biochemists, medical scientists, physicists, chemists, economists, political scientist, sociologists, psychologists, historians etc.
- **Food preparation and serving related occupations:** chefs and cooks, waiters, fast food workers, dishwashers, food servers etc.
- **Occupations related to transportation and material moving:** truck, bus, train and taxi drivers, pilots, flight attendants, rail transportation workers, movers, delivery workers, gas station operators etc.
- **Occupations related to personal care, childcare and leisure:** hairdressers, barbers and related, makeup artists, cosmetologists and related, personal care aides, childcare workers, all the occupations related to leisure and entertainment, like sport and gaming, cinemas, etc.
- **Healthcare support occupations:** such as home health aides, nursing assistants, physical therapist assistants, dental or medical assistants etc.
